» About Milestone

Reliability, Service, Discretion

From small and modest beginnings, Milestone is now proud to be regarded as one of the UK's leading suppliers and direct to site specialists for rail, construction and decorative aggregates.

With our Head Office and bagging plants based in Tilbury Essex, we are ideally situated in a prime location for direct supply into London and the surrounding Home Counties. Alongside our extensive product range, we also offer contract bagging, mixing, screening and specialist haulage solutions across the UK.

Our specialist fleet of HGV's including crane offload facilities enables us to provide a fast and efficient service, 24 hours a day, 7 days a week. Backed by our accreditations such as ISO 9001, BALI, RISQS and FORS, our team here at Milestone work tirelessly to keep our business sustainable, safe and successful.

We are relationship builders and thrive on collaboration and reciprocal trade and we understand the sensitive and demanding nature of the supply chain. That is why we

are governed by our three most important beliefs, Reliability, Service and Discretion.

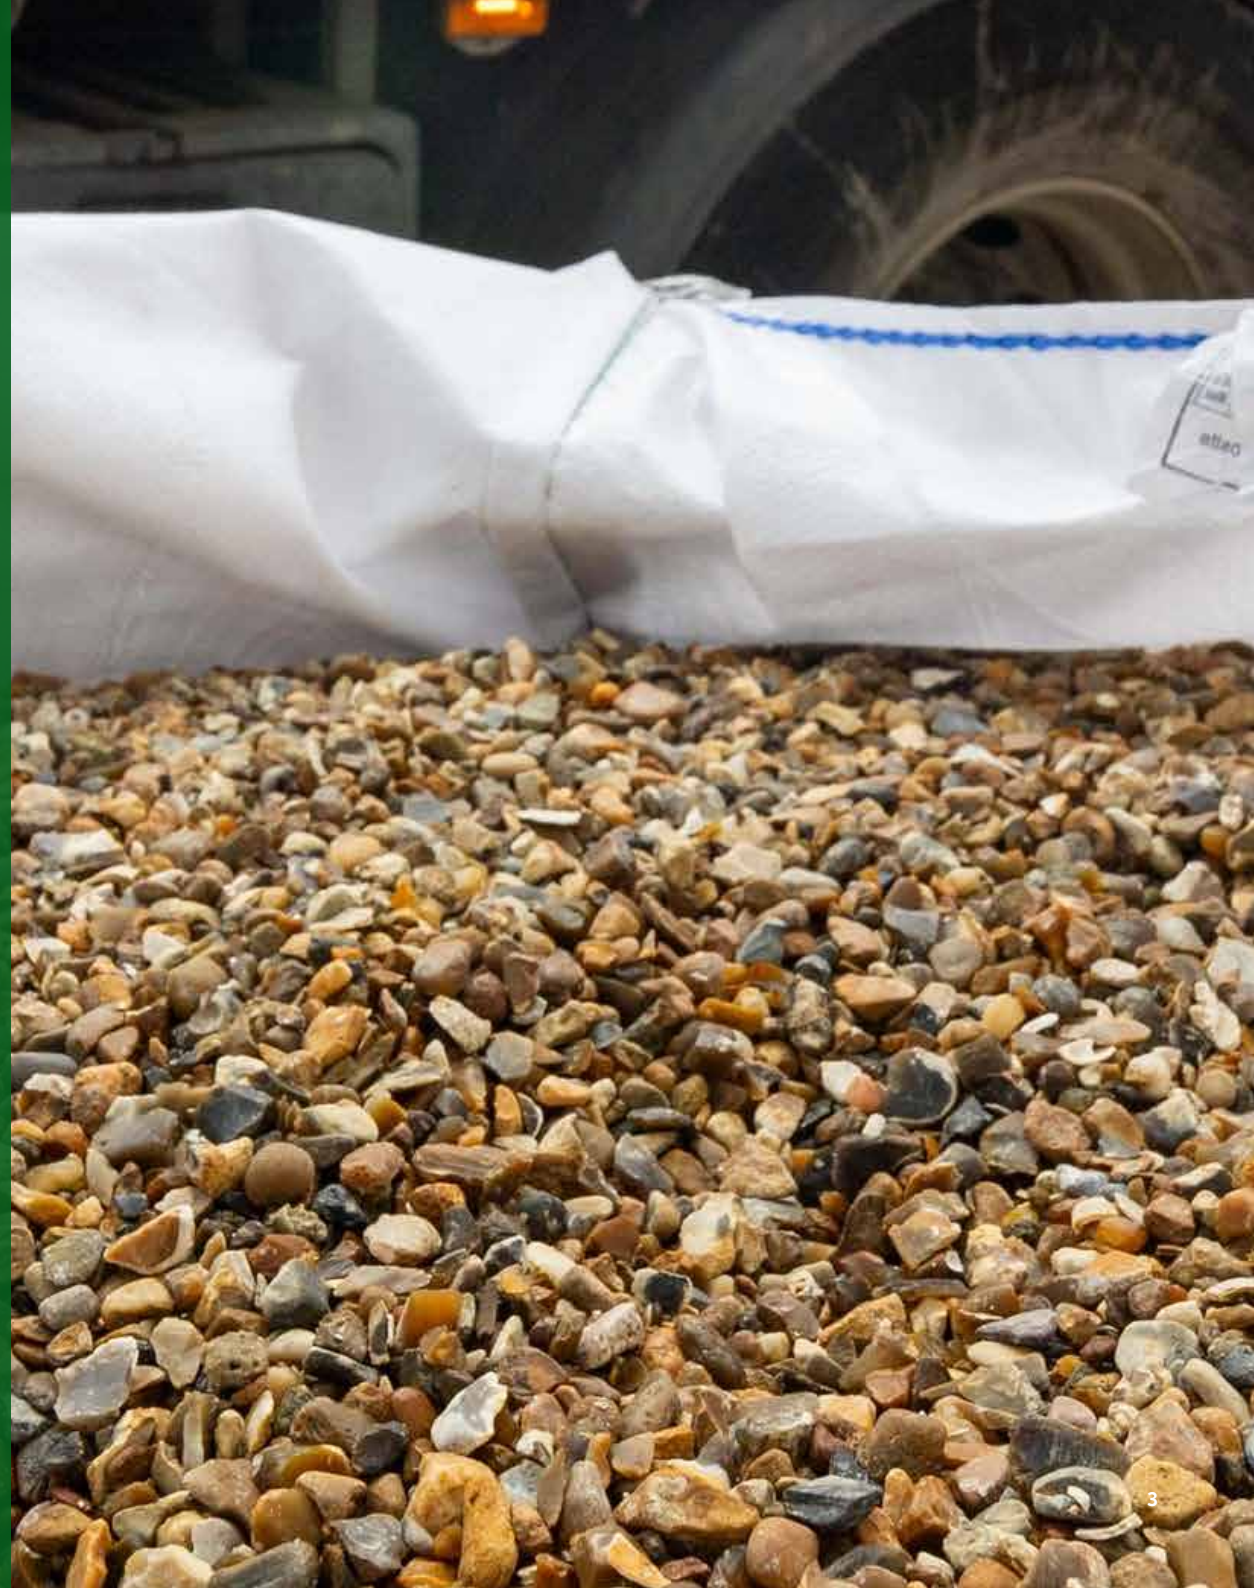

Adopting the responsibility of a good middle man, we understand the importance of protecting your customer base, that is why we can provide a discreet, reliable supply service where your end user is given the impression that it is your own.

We hope you enjoy our catalogue and website. Should you require any further assistance please call or email a member of the team today on **01708 984740** or email sales@milestonesupplies.co.uk.

Yours sincerely,

Matthew

Matthew Coussens
Managing Director

» Aggregates and Gravels

Aggregates and Gravels are essential materials within the landscaping and construction sectors. Whether your project is private or commercial, Milestone offers an extensive range of construction, recycled, slate and decorative aggregates and gravels.

Our Range

Construction Aggregates

We offer an extensive range of construction aggregates. Our range consists of sands, shingles and sub-base materials. Locally and sustainably sourced and packaged in various options including bulk bags, mini poly bags and loose loads.

Recycled Aggregates

These are granular materials produced by crushing and reprocessing waste from construction, demolition, and excavation projects. These materials, which include crushed concrete, asphalt and brick, serve as a sustainable and often more cost-effective alternative to primary or virgin aggregates quarried from natural sources. They are widely used for road sub-bases, drainage systems, landscaping, and increasingly in new concrete production.

Cement, concretes & mortars

These are distinct construction materials. Cement is a binding powder; concrete is a durable

mixture of cement, water, and large aggregates (gravel/stone) for structural elements. Mortar blends cement, water, and sand to bind bricks or stones. Concrete provides structural strength, while mortar offers adhesive bonding.

6G Gabion Stone

A specialised, durable angular aggregate graded between 75mm and 200mm (commonly 100–200mm or 100–150mm), designed specifically for retaining walls, coastal defence, and landscaping. It provides high-strength, self-draining, and durable interlocking support for engineering and decorative projects. 6G Gabion stone complies with the Manual of Contract Documents for Highway Works (MCHW) for quality.

Decorative Aggregates

Whether you're lining flower beds, creating a unique stone feature or covering an entire driveway, you'll be sure to find the right materials for this job within our collection of decorative aggregates.

These practical yet beautiful aggregates and gravels can be used to brighten up any area of your garden. They're durable, they're versatile, and they can be easily mixed and matched to produce truly bespoke features that will be sure to liven up your landscape.

Decorative Slates

A popular low-maintenance choice for landscaping, valued for their ability to suppress weeds and retain soil moisture while providing a clean, modern aesthetic. They are available in various forms, from small chippings and mulch to large rockery stones and decorative wall cladding. Slate is naturally flat, giving a neater finish to your outdoor space which makes it a popular choice for mulching of borders.

We also offer a range of gravel stabilisation products along with De-icing salt during the harsh Winter season.

» Cements, Concretes & Mortars

Quickcem

Quickcem is an ideal cement for repair and maintenance applications where the increased rate of set and strength development are beneficial in both mortar and concrete.

Multicem Plastic Bag

Multicem cement is commonly used cement for a wide range of applications. These applications cover but are not limited to Multicem concrete, mortar, render and screeds.

Multicem Paper Bag

Multicem cement is commonly used cement for a wide range of applications. These applications cover but are not limited to Multicem concrete, mortar, render and screeds.

High Strength Cement

Our HS52 applications cover but are not limited to, general Ready-Mixed concrete, High Strength Pre-Cast and Pre-Stressed Concretes, Concrete Block Paving (CBP), Grout, Mortar, Render and Screeds.

General Purpose Cement

General Purpose cement is commonly used cement for a wide range of applications. These applications cover but are not limited to general purpose concrete, mortar, render and screeds.

Fast Set Postfix

Contains Portland cement and special additives together with sharp sand and 10mm aggregate. Heidelberg Materials Fast Set PostFix is used for fence posts, gate posts, pergolas, garden lighting and rotary lines.

Postfix

Contains Portland cement and special additives together with sharp sand and 10mm aggregate. Heidelberg Materials PostFix is used for fence posts, gate posts, pergolas, garden lighting and rotary lines.

40N Concrete

Our 40N Concrete can be used for a whole range of building projects requiring a concrete with high compressive strength.

40N Easyflow

Concrete can be used for a wide range of building projects requiring a concrete with high compressive strength.

Sand Cement Mortar

An easy-to-use mixed mortar that meets the requirements of M6 specification, suitable for general-purpose use.

» Gravel Stabilisation – Core Drive

Setting industry standards with its closed cell design, heat-welded membrane, and iconic honeycomb shape, CORE DRIVE is the ideal solution for creating smart, stable gravel driveways and parking areas.

While gravel offers an attractive, affordable, and versatile surface for landscaping and construction projects, it can shift and spread if it's not suitably controlled. Our gravel grids provide an effective solution by creating a porous base that keeps gravel in place, free from ruts dips puddles or potholes!

Site Specific Solutions

Incredibly easy to install, cost-effective and virtually invisible once filled, CORE DRIVE is unlike any gravel grid on the market. Our permeable pavers are specifically designed for different traffic types and site conditions, whether your project is a sloped residential driveway or a busy commercial parking area, CORE has you covered.

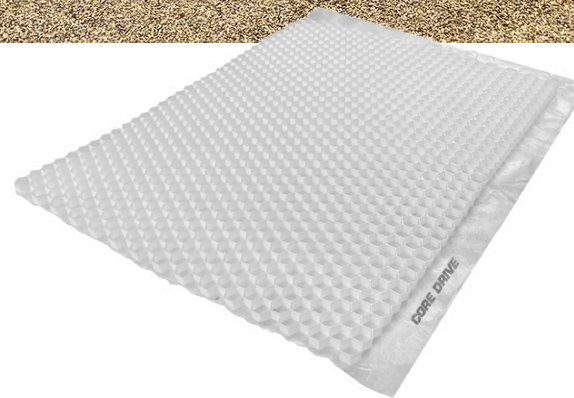

CORE DRIVE

Products available in:

Available in the following packaging:

Pallet

Core Drive 40-30 (1600 x 1200mm)
Driveways & Parking Areas

Core Drive 40-40 (1600x1200mm)
Driveways & Light Commercial

» Gravel Stabilisation - Core Path

Gravel Pathway Stabiliser

Create stunning, durable pathways and gravel spaces with ease using CORE PATH Gravel Pathway Stabiliser. Designed for DIY enthusiasts and landscaping professionals alike, our stabilisation grid ensures gravel stays firmly in place, is low maintenance, and remains impeccably functional for years.

The innovative solution stabilises gravel of various sizes so that it remains in situ, thanks to a honeycomb grid that's only 20mm in depth, allowing you to reduce the volume of expensive decorative gravel normally required. Made from high-quality materials, it's available in grey (recycled materials), or white (naturally sourced, raw materials).

In addition, CORE PATH has a high quality geo-textile membrane firmly heat welded to the underside, which prevents weeds from coming through, minimises maintenance and enhances its long-lasting durability.

» Contract Bagging

At Milestone, we've invested significantly in state-of-the-art contract bagging equipment that can make light work of even the largest and most labour-intensive commercial packing projects.

These packing machines are designed to save our customers time and money by automating much of the bagging process. Our brand-new bulk bagging machine can fill up to 300 bags per hour, making it ideal for higher volume orders, while our poly bagging machine can pack up to 12 pallets per hour, with each pallet weighing one tonne.

All of our industrial contract packing services are carried out at our premises in Tilbury, Essex, which is conveniently located close to the A13 and M25 for quick links to the South East of England. Once the project has been completed, packed goods can be shipped to a location of your choice anywhere in the UK (subject to the usual transportation and delivery costs).

We can pack large quantities of all kinds of materials, including (but not limited to):

- Decorative & commercial aggregates
- Decorative pebbles
- Roofing pebbles
- Topsoil, wood chippings and decorative bark
- Subsoil
- Dried sand
- Track ballast
- Rock salt

Our poly bagging machine can pack items in bags up to 25kg in weight, with 10kg, 15kg and 20kg weight options also available.

» Rail

Rail is a high risk, 24/7 operation, therefore, whenever materials are required, trusting and picking the right supplier is crucial.

Milestone is that supplier. We stock and supply a wide range of rail aggregates in mini bags, bulk bags and loose loads. Our collection includes track ballast, specialist granite chippings and a massive construction aggregate range.

Because we have undergone the rigorous audits needed to become a RISQS approved supplier, all the materials within our range are approved by Network Rail and other specialist industry providers. We are proud to offer a 24 hour 7 day a week delivery service. Emergency loads are also available on request.

» Pebbles & Cobbles

Pebbles and cobbles are naturally rounded, water-worn stones used primarily for garden landscaping, water features, and structural ground cover. The main difference between them is size: pebbles typically measure between 20mm and 50mm, while cobbles are larger in size ranging from 50mm up to 200mm+.

Our Range

We stock an extensive range of **decorative Pebbles and Cobbles**, ranging from Rounded Flint Stones to Scottish Beach, Flamingo, Ebony and Ice blue cobbles. Our Pebbles & Cobbles are perfect for brightening up your commercial and garden landscape all year round.

Decorative pebbles and cobbles are a popular choice for adding texture and colour to gardens, pathways, and water features. We supply in mini bags, bulk bags and loose loads nationwide, delivered on specialist vehicles often with a crane offload facility.

Flat and green roofing systems often utilise specialised components like pebbles, cobbles and shingles for protection, drainage, and aesthetics. These materials are crucial for protecting waterproofing

membranes from UV rays and wind uplift, while green roofs add vegetation for environmental benefits.

Our green roof pebbles, cobbles and shingles are an essential component of a green roof, used to create a vegetation-free zone. These zones meet building regulations and ensure that drains, rooflights, and outlets remain clear of debris and plant growth. Our range is available in mini bags and bulk bags delivered nationwide on a range of specialised vehicles. We are equipped to work with your onsite teams, providing quality products which are packaged to assist safe offloading and lifting via tower cranes.

» Boulders & Rockery

Milestone stocks and supplies an extensive range of Boulders and rockery stones.

Our Range

Mixed glacial boulders are collections of natural stones which typically include granites, quartzites, and in some cases gneiss. The material has been shaped and transported by ice glacial movement. Our Boulders in most cases are well rounded and smooth although some can have a more angular character. Colours can range from mid-grey granites with tones of pink, along with some finely banded grey to buff coloured quartzites.

Ideal for a wide range of private and commercial landscaping projects and are commonly used as feature stones, water features, retaining walls and deterrents.

Natural play refers to child-led, open-ended engagement with the natural world, using Boulders, sand, wood and naturally rounded pebbles rather than prescriptive

plastic structures. It prioritises and enhances curiosity and creativity, allowing children to manipulate natural products and stones to build their own narratives.

Our play boulders can be delivered nationwide by our fleet of specialist HGV's. We are very proud to also offer a product placement service.

Rockery stones are large, decorative landscaping stones used to create naturalistic features, focal points, and tiered planting areas in private gardens or larger commercial areas. Ranging from Granite, Limestone and Slate, they are durable, low-maintenance, and ideal for creating raised beds, water features, rock gardens and pond areas.

»» Mixed Glacial Boulders

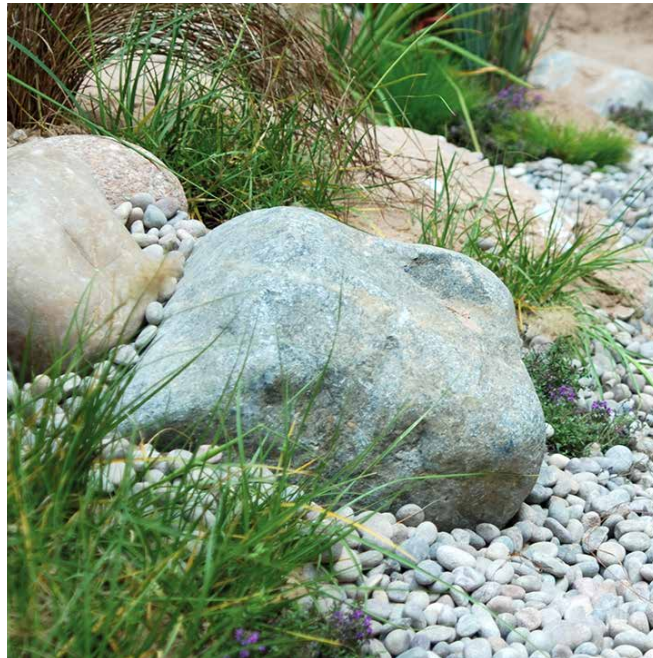

Our Mixed glacial boulders are collections of natural stones which typically include granites, quartzites, and in some cases gneiss. The material has been shaped and transported by ice glacial movement. Our Boulders in most cases are well rounded and smooth although some can have a more angular character.

» Paving

Choosing the right paving depends on your project type, budget, and design preference. Our range of paving materials generally fall into four main categories: **Traditional, Sawn Sandstone, Sawn Granite and Porcelain.** We also stock an extensive range of **Steps and Setts** to complement our paving products.

Our **Traditional sandstone paving** is a versatile, hard-wearing choice for gardens, patios and pathways favoured for its naturally riven surface and unique tonal variations. The material is typically hand-cut and calibrated to around 22mm in thickness. Our range of fossil, raj sandstone offers a rustic aesthetic that complements all types of traditional property settings.

Our **Sawn sandstone paving** range is a premium natural stone choice machine-cut on all four sides to create completely straight edges with a smooth sandblasted top finish. This modern aesthetic differs significantly from traditional hand-split, riven sandstone and adds a stylish look to many landscaping projects.

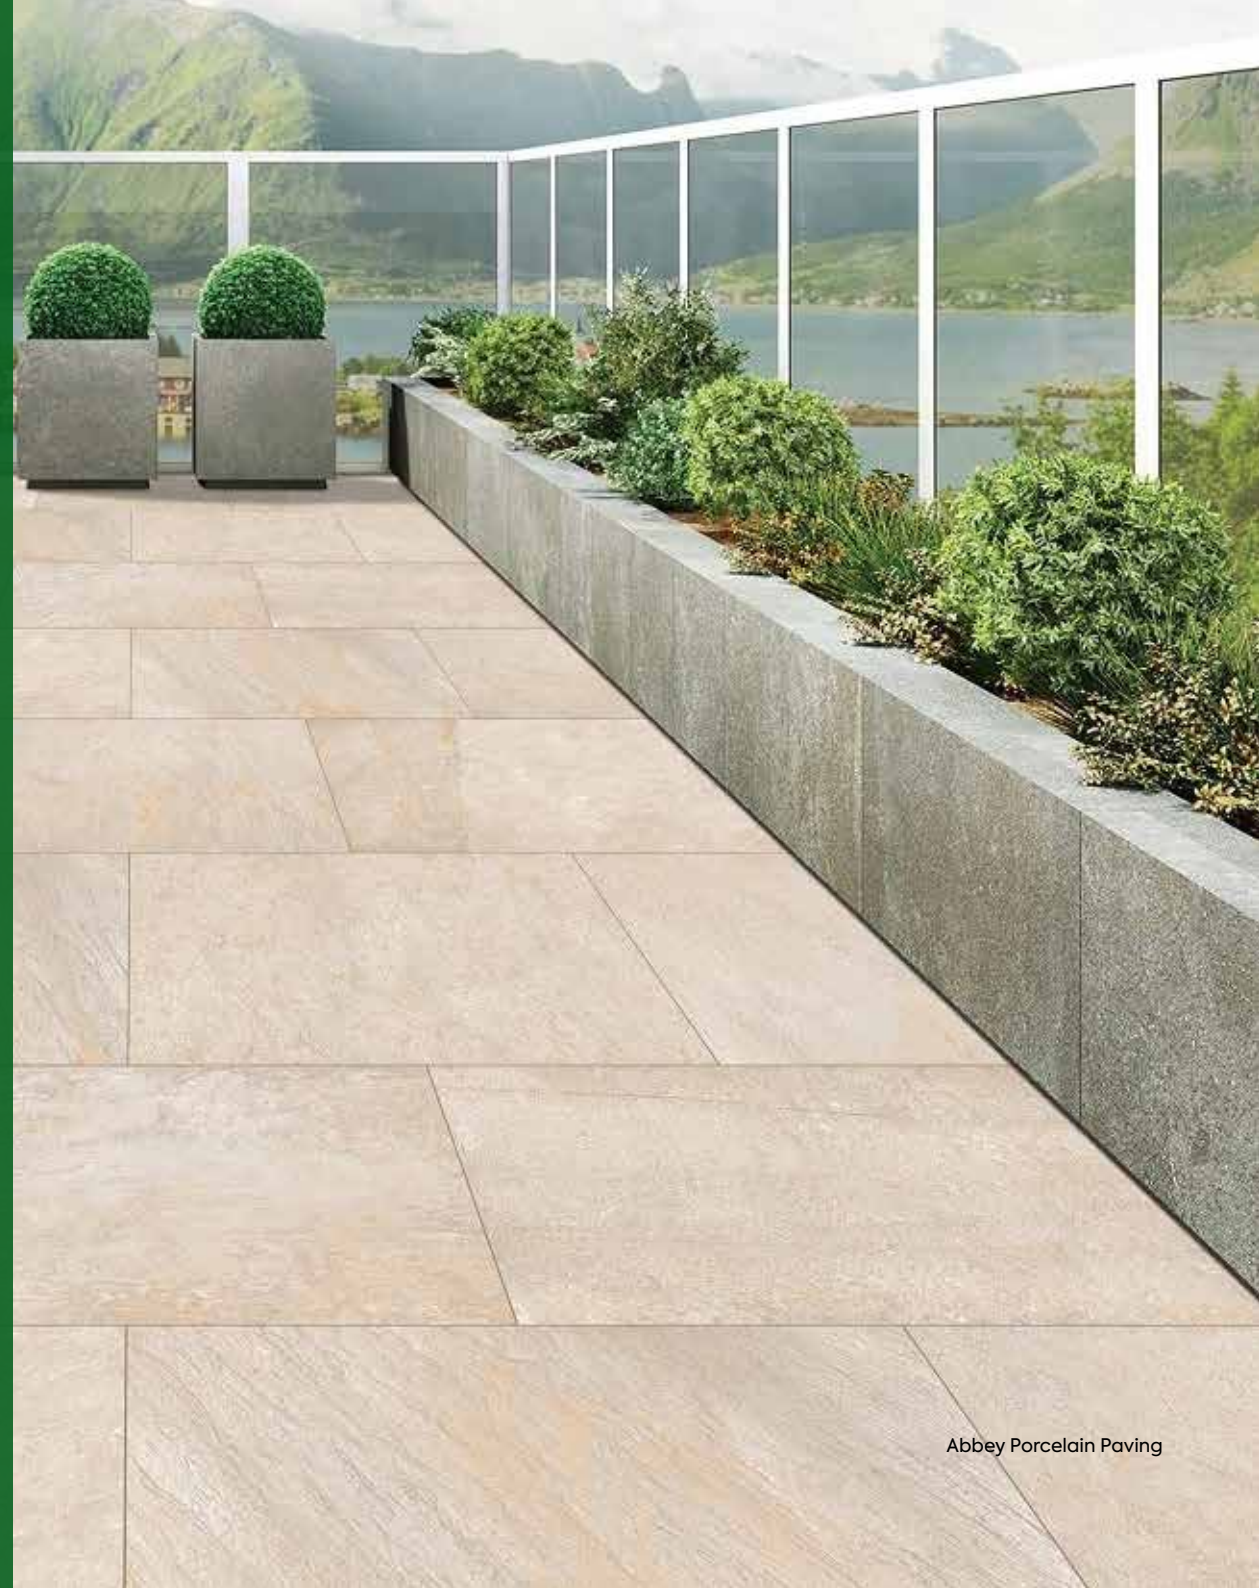

Sawn granite paving is a premium, highly durable natural stone flooring choice celebrated for its sharp, straight machine-cut edges and ultra-modern aesthetic. Because raw sawn

Granite can be incredibly slick when wet, its surface is almost always treated with a texture, this being either a flamed or bush hammered finish on its top surface.

Our Porcelain paving is an engineered, vitrified outdoor tile made from refined clay and minerals fired at extreme temperatures, making it highly durable, frost-proof, and virtually maintenance-free.

One of the biggest advantages of Porcelain paving is its resistance to staining and fading. Unlike natural stone, Porcelain tiles are non-porous, which means that they do not absorb liquids or stains, making them very easy to clean and maintain.

Additionally, Porcelain is resistant to fading, so the colour of the tiles will remain vibrant and consistent over time, even when exposed to sunlight and other weather conditions.

Milestone
Aggregates • Interiors • Reclamation

» Haulage & Storage Solutions

Here at Milestone, we know that finding the right landscaping supplier can be difficult. You need to trust your chosen company to provide you with what you need on time, within budget, and using a haulage method that best meets your needs.

Delivery Options

That's why we are proud to offer a wide range of specialist vehicles and delivery services. Our specialist fleet boasts six wheeled rigids, eight wheeled rigids and wagon and drags, all with a crane offload facility.

Alternatively, we offer a range of Artic Flat vehicles and Moffetts. If you are looking for loose loads, we have eight wheeled tippers and artic aggregate tippers. Our Courier network service can cover any last-minute orders nationwide.

Storage Solutions

We offer a storage solution here at East Tilbury yard, our 2.5-acre site is in close proximity to major hubs like the Port of Tilbury and London Gateway. This makes it ideal for storing various types of construction and landscaping materials.

We can store and tranship onto smaller more specialist vehicles. We only use FORS accredited vehicles making us ideal for onward deliveries into Central London and the Home Counties.

» Our Fleet

Six Wheeled Rear Mounted Crane

The six wheeled rear mounted crane is ideal for smaller loads or tighter access. The advantage of having a rear mounted crane means you have the flexibility of where the product can be placed on site.

SPECIFICATION	
Max load weight:	13 tonnes
Bed length (approx.):	6.6m
Maximum vehicle height	3.72m
Crane capacity full extension (approx.):	1.5 tonnes

Draw Bar Crane (Wagon & Drag)

The Draw Bar with crane has a higher payload than the rigid vehicle and if required can be split by dropping the trailer to gain access to almost any site, therefore ideal for very tight sites where the economy of large loads can be maximised, therefore reducing unit cost for the customer.

SPECIFICATION	
Max load weight:	27.7 tonnes
Bed 1 length (approx.):	6.6m
Bed 2 length (approx.):	5.64m
Maximum vehicle height	3.72m
Crane capacity full extension (approx.):	1.5 tonnes

Eight Wheeled Rear Mount Crane

The eight wheeled rear mount rigid crane carries 18 tonnes and can get into almost any site. The advantage of having a rear mounted crane means you have the flexibility of where the product can be placed on site.

SPECIFICATION	
Max load weight:	17.5 tonnes
Bed length (approx.):	8.3m
Maximum vehicle height	3.66m
Crane capacity full extension (approx.):	1.5 tonnes

Flatbed Artic Vehicle

Without the weight of a crane to carry, these lorries carry our heaviest loads making them the most economic where void or palletized loads need to be delivered.

Available as a curtainsider.

SPECIFICATION	
Max load weight:	29 tonnes
Bed length (approx.):	12.2m
Maximum vehicle height:	4m

Moffetts

These trucks are designed to handle heavy loads and are capable of transporting goods efficiently, especially in tight spaces.

Moffett-mounted forklifts enable drivers to load and unload goods without needing on-site forklifts, saving time and enhancing service.

Moffett vehicles are ideal for locations without dedicated loading equipment, making them suitable for busy urban areas and remote delivery points.

SPECIFICATION	
Maximum operating height:	3m
26 tonne Rigid moffett payload 12,000kgs	Up to 16 pallets
40 tonne Artic moffett payload 22,500kgs:	Up to 26 pallets

Rigid Flatbed Vehicle

We have six wheeled Rigid Flatbeds available. With load capacities of up to 14 tonnes with a level platform without sides or a roof, providing easy access for loading and unloading goods and making them suitable for various products such as construction, agriculture, and Landscaping.

SPECIFICATION	
Max pay load weight:	14.5 tonnes
Bed length (approx.):	6.6m
Maximum vehicle height:	3.72m

Artic Curtainsider Vehicle

These are heavy goods vehicle (HGV) comprising a tractor unit and a semi-trailer with retractable PVC-coated side curtains.

They enable rapid, side-loading access via forklift for palletized goods, typically featuring a 13.6-meter trailer length (44-tonne capacity). These vehicles offer versatile, secure transport for diverse, large-scale loads.

SPECIFICATION	
Max load weight:	26 tonnes
Bed length (approx.):	12.2m
Maximum vehicle height:	3.72m

Rigid Tail Lift Vehicle

Rigid trucks with tail lifts combine robust cargo capacity with easy loading and unloading, making them ideal for versatile commercial transport.

A tail lift allows goods to be raised from ground level directly into the truck's cargo area, eliminating manual lifting and reducing the risk of injury.

SPECIFICATION	
Tail-lift capacity:	1.8 tonnes
Maximum operating height:	3m
12 tonnes curtainsider moffett payload 6,000kgs:	Up to 10 pallets
18 tonnes curtainsider moffett payload 8,000kgs:	Up to 14 pallets
26 tonnes curtainsider moffett payload 15,000kgs:	Up to 16 pallets

Rigid Moffett Vehicle

These trucks are designed to handle heavy loads and are capable of transporting goods efficiently, especially in tight spaces. Moffett-mounted forklifts enable drivers to load and unload goods without needing on-site forklifts, saving time and enhancing service. Moffett vehicles are ideal for locations without dedicated loading equipment, making them suitable for busy urban areas and remote delivery points.

SPECIFICATION	
Moffett lift capacity:	1.8 tonnes
Maximum operating height:	3m
26 tonne curtainsider moffett payload 12,000kgs:	Up to 16 pallets
40 tonne curtainsider moffett payload 22,500kgs:	Up to 26 pallets
40 tonne flatbed moffett payload 24,500kgs (without moffett):	Up to 26 pallets

Bulk Aggregate Tipper

Alloy bodied tipping trailers, capable of carrying various loads from aggregate to crushed glass.

Due to the greater carrying capacity, bulk tipping trailers are a more economical alternative to the standard 8 wheel tipper.

SPECIFICATION	
Max load weight:	29 tonnes
Maximum vehicle length:	3.97m
Maximum vehicle length:	9.63m

Eight Wheel Steel Bodied Tipper

A fantastic addition to our aggregate tipping fleet. This Steel bodied vehicle can carry granite setts, large cobbles and pebbles along with more standard products such as sand, ballast, type 1, and decorative aggregates.

SPECIFICATION	
Max load weight:	19 tonnes
Maximum vehicle length:	9.63m
Maximum vehicle width:	2.5m
Maximum vehicle height:	3.5m
